SUMMARY

Data Scientist with 5+ years of experience building machine learning systems and data-driven solutions across e-commerce and retail domains. Proven track record of improving business outcomes, including reducing customer churn by 18% and increasing demand forecast accuracy by 25%.

Specialized in Agentic AI systems, machine learning, and explainable AI, with research contributions in credit risk modeling and evaluation frameworks. Strong expertise in translating complex data into scalable systems and actionable business insights.

EDUCATION

Sikkim Manipal University Bhubaneswar
MBA

Berhampur University Berhampur
B.Sc.

EXPERIENCE

Data Scientist Sep 2020 – Present
Shiasy Online Retail Solutions Bhubaneswar

- Designed and deployed ML-based customer segmentation and retention models, reducing customer churn by 18%
- Developed time series forecasting models to predict demand and seasonality, improving forecast accuracy by 25%
- Analyzed large-scale multi-country datasets using Python and SQL to identify revenue drivers and growth opportunities
- Built interactive dashboards using Tableau and Excel, improving executive visibility by 40%
- Automated data pipelines and reporting workflows, saving 12+ hours/month per analyst
- Collaborated with cross-functional teams to translate analytical insights into business strategies
- Worked with AWS (S3, Redshift) for scalable data storage and processing

Web Developer (Data-Driven Applications) May 2015 – Aug 2020
Shiasy Online Retail Solutions Bhubaneswar

- Engineered high-performance e-commerce platforms, increasing conversion rates by 28%
- Improved page load performance by 40% through optimization techniques (lazy loading, code splitting)
- Led CMS migration to WordPress, improving content efficiency by 60%
- Integrated payment systems, APIs, and analytics tools for scalable web solutions

PROJECTS

Multi-Agent Job Application Automation System | Agentic AI | LLM Orchestration | Workflow Automation

- Architected a multi-agent AI system to automate job discovery, matching, and application workflows
- Developed specialized agents for job scraping, resume parsing, matching, and application orchestration
- Implemented planner-executor architecture enabling intelligent task coordination and parallel execution
- Integrated LLM-based reasoning for semantic job-resume matching and decision-making
- Designed a modular and scalable agent framework for extensible automation pipelines

Resume Matcher Application | NLP | Information Retrieval

- Built an NLP-based job-resume matching system using SpaCy and TF-IDF
- Automated entity extraction and similarity scoring for candidate-job fit evaluation
- Deployed a Streamlit app for real-time scoring and feedback

Gold Price Prediction System | Time Series Forecasting

- Developed forecasting models to predict gold price trends and seasonality
- Applied feature engineering and ensemble methods to improve prediction stability
- Built an interactive Streamlit dashboard for visualization

TECHNICAL SKILLS

Programming: Python, SQL

Machine Learning & AI: Supervised & Unsupervised Learning, Regression, Classification, Clustering, Time Series Forecasting, Feature Engineering, Model Evaluation, A/B Testing

Advanced AI Systems: Multi-Agent Systems, LLM Orchestration, Prompt Engineering, Workflow Automation

Libraries & Tools: Pandas, NumPy, Scikit-learn, TensorFlow, SpaCy, Matplotlib

Visualization: Tableau, Power BI, Cognos, Advanced Excel

Cloud & Deployment: AWS (S3, Redshift), Streamlit

Data Engineering: ETL Pipelines, Data Wrangling, Automation

CERTIFICATIONS

AWS Solutions Architect – Edureka (2024)

Full Stack Data Science Program – AlmaBetter (2023)

IBM Data Analyst Professional Certificate – Coursera (2025)

RESEARCH PUBLICATION

Accepted & Presented – ICRET 2026 “Trigger Precision: A Business-Oriented Evaluation Framework for Credit Risk Prediction” - Proposed a novel evaluation framework for credit risk early warning systems - Benchmarked ML models including LDA, Logistic Regression, Random Forest, Gradient Boosting, XGBoost, and Neural Networks - Applied threshold optimization and precision-recall tradeoff analysis on large-scale financial datasets - Selected for publication in the Indonesian Journal of Science and Technology
